Metal clads dealership

Creal Clark and Seifert Architects/Engineers Inc. specified a variety of metal building products for **Tri-State Ford** in **Maryville, Mo.** Clear span truss frame supports the main structure, showroom and entrance. The showroom's exterior walls are aluminum-and-glass framed.

The entrance was built with a 30-foot-tall, curved metal composite material (MCM) panel-sail framed with steel. Additionally, MCM panels were used to construct a 210-foot-long, curved exterior brand wall in the front of the building

American Buildings Co. supplied a metal building system, roofing and wall panels for the project. Galvalume Standing Seam 360 metal roof panels and Architectural III metal wall panels in Slate Gray were installed. The 29,470-square-foot project began in July 2015 and was completed in March 2016.
