

**Headsight Inc.'s building,  
Bremen, Ind.**

Project goals for Headsight Inc.'s office, shipping and development building included modernizing the facility and using reclaimed wood. Caleb Schafer, architect for the 18,000-square-foot project, designed it to display the progression from old harvesting to present technology. Reclaimed barn siding clads some of the interior, all the floors are polished concrete and there is an old barn hay track in the peak area.

Ace Builders Inc. constructed it with American Buildings Co.'s steel structure framing system, 24-gauge Seam-Loc metal roof panels in Slate Gray and Architectural V-Rib metal wall panels in Slate Gray. Challenges included putting wide panels together on the jobsite using detailed drawings. The project was completed in March 2014.
