BUILDING END-USE

Rotary Milking Parlor

B & D Dairy consists of a rotary milking parlor with a milk room, mechanical room and offices. The exterior features split face block walls with long span roof, multiple framed openings, a loading area, and a holding area.

A privately owned company, B & D Dairy uses 7,000 acres of land to produce corn silage and alfalfa for their 7,500 animals. They ensure all animals are given the best nutrition, and with this new facility, a comfortable environment in which to be milked and housed.
