

June 18, 2024

In an effort to align anchor rod spacing for 3/4" and 1" diameters, the standard spacing for 3/4" rods has been revised as shown below. This revised spacing will aid in eliminating confusion when setting rods to accommodate both diameters. In addition, the revised 3/4" rod spacing will eliminate tightening issues that are being experienced due to weld bead interferences.

Current Spacing for 3/4" Anchor Rods

New Revised Spacing — 3/4" & 1" Anchor Rods

Critical Dates: This change was introduced in our Design and Detailing software June 14, 2024. All jobs processed with the newer software after this date will include the revised spacing.

Our Commitment: American Buildings is committed to ongoing improvements in all aspects of our business. This change is intended to enhance our product offerings and competitiveness in the marketplace. Your input and comments are always appreciated. If you have specific questions regarding this bulletin or any other area of our business, please contact your District Sales Manager or Project Coordinator.
