

Galway Fire Department

LOCATION

Galway, NY

SIZE

11,840 sf

WALL SYSTEM

Mesa Insulated Metal Panel

ROOF SYSTEM

SS360/Deck Regal White

BUILDING END-USE

Volunteer Fire Department

This volunteer fire department can better serve the Galway, New York, community with its pristine 11,840 sf facility. The station has four spacious drive-through bays, a locker area, training space, and a large kitchen and meeting area suitable for hosting public events.

The apparatus bay uses a single slope framing system that is 5,000 sf. Radiant heat flooring and large glass roll-up doors finish the space. A tower structure with red accent panels recesses into the lean-to building, providing contrast against the white Mesa insulated metal paneling. Varying heights and dark trim add dimension to the structure and elevate its appearance.
